PROFILE

I have worked in the IT field since April 2021 in positions with the US Army Reserves as well as within the realm of Healthcare IT. I have specialized in areas such as hardware replacement, device imaging, printer mapping, and more; but I would love to broaden my horizons to more technical positions working in full-stack web development to advance my skills and career.

WORK EXPERIENCE

IT SERVICE DESK ANALYST II – CARLE HEALTH | 2024-PRESENT

I work for the IT Service Desk at Methodist Hospital performing tasks including device imaging, device configuration, printer mapping, basic troubleshooting, and hardware replacement. I also perform rotational On-Call performing these tasks as well as password resets and account unlocks for users. I strive to build rapport and assist customers in a timely fashion to alleviate their issues as swiftly as possible.

IT CONTRACTOR – LEVI, RAY & SHOUP, INC | 2023-2024

I worked as a contractor under the supervision of Carle Health to assist with Project Echo migration from UnityPoint Health to Carle Health in the Peoria Service Area. I performed tasks such as device imaging and configuration as well as device swaps and deployments on-site. I singlehandedly imaged and configured all devices for all PSA clinics outside of the hospitals before being brought onboard full-time by Carle Health.

US ARMY RESERVES | 2019-PRESENT

I was trained as a 25B IT Specialist from 2020-2021 to perform tasks such as hardware assembly/disassembly, device imaging, software installation, network configuration via VMWare, and more. In 2025, I reclassified to a 94E Radio Equipment Repair Specialist for the needs of the Army, but I still utilize my IT skills.
